Family Services of Greater Waterbury Announces the Implementation of an Electronic Health Record System

WATERBURY, CT - Thanks to a very generous donor who wishes to remain anonymous, Family Services of Greater Waterbury proudly announces the implementation of an Electronic Health Record System.

Thousands of behavioral health and human services providers across the country will soon be required to adopt an Electronic Health Record (EHR) system. For the past three years, the Technology Team made up of Agency staff interviewed several companies and participated in a number of on-site demonstrations. After careful consideration we decided that the Qualifact's product, "Carelogic" was the best fit.

Our new technology will give us the tools to work more efficiently, serve more people, increase revenue with improved billing and gather and track important data to help us continually improve our clinical outcomes.

If you are considering moving in the direction of implementing an Electronic Health Records System, we will be happy to share our experiences with Carelogic which currently supports a Connecticut Users Group comprised of 15 different organizations throughout the state.

Our staff joyously ripping up their paper folders and charts as they begin their Electronic Health Records adventure.
